Hypoxic Ischemic Asphyxial Syndrome

Neonatal Maladjustment Syndrome

Dummy Foals

---

---

---

---

---

---

---

---

## Changes in Behavior

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

## Neonatal Intensive Care

---

---

---

---

---

---

---

---

## Hypoxic-Ischemic Syndrome

- Human Neonates - cerebral palsy
  - Prolonged Stage II
  - Lawsuits
  - Clinical studies on onset
    - Intranatal
    - Prenatal
    - Postnatal
- Experimental Studies
  - Hypoxic ischemic insults
  - Hypoxic ischemic encephalopathy (HIE)

---

---

---

---

---

---

---

---

## Neonatal Problems Hypoxic Ischemic Asphyxial Disease

- Selective neuronal pathology
- Renal pathology
- Gastrointestinal pathology
- Metabolic failure
- Cardiovascular pathology
- Endocrine abnormalities
- Pulmonary pathology

---

---

---

---

---

---

---

---

## Neonatal Problems

- Hypoxic ischemic asphyxial disease?
  - Often no evidence
- Inflammatory placental disease
  - Strong correlation
- Role of inflammatory mediators?
  - Cytokines, local vasoactive mediators
  - Primary effect?
  - Secondary hypoxic ischemic insult?

---

---

---

---

---

---

---

Hypoxic  
Ischemic  
Insults

Inflammatory  
Insults

---

---

---

---

---

---

---

## Role of Placentitis

- Many neonatal diseases
  - Multiple etiologies
  - Disruption of fetal life
    - Predispose to neonatal disease
    - Origin of the neonatal disease
- Placentitis - untreated
  - Neonatal diseases
    - CNS, Renal, GI
- Placentitis - treated
  - Protects against neonatal diseases

---

---

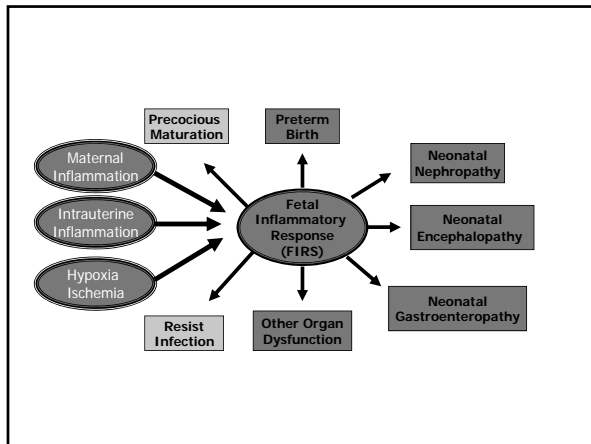

---

---

---

---

---

---

---

---

---

---

---

---

---

### Septic Encephalopathy

- Fetal
  - Neuroinflammation
  - FIRS (Fetal Inflammatory Response Syndrome)
    - Fetal placentitis
- Maternal
  - Maternal placentitis
  - SIRS
  - Focal maternal infections

---

---

---

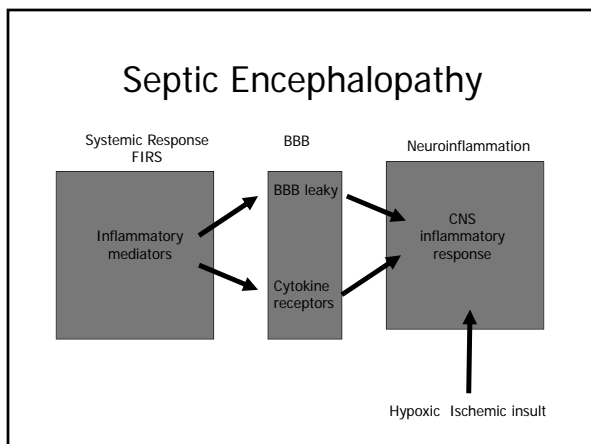

---

---

---

---

---

---

---

---

---

---

---

---

---

## Neuroinflammation

- Important in the pathogenesis of
  - Septic encephalopathy
  - Hypoxic ischemic encephalopathy
- Microglia cells are key
  - Up-regulation of proinflammatory cytokines
  - Up-regulation of trophic factors
- Can result in
  - Morphological alterations
  - Biochemical alterations
  - Functional alterations

---

---

---

---

---

---

---

## Neuroinflammation

- Response depends on mix
  - Proinflammatory
  - Anti-inflammatory
  - Specific mediators
- Mild disease – often no morphologic changes
  - Motor
  - Perceptual, visual
  - Behavioral
  - Cognition
  - Excitatory responses
- Excitotoxicity

---

---

---

---

---

---

---

## Neurosteroids

- Protect the brain during fetal life
- Responsible for the somnolence
- At birth
  - Removal of the placental
  - Levels drop rapidly
  - Fetus to “awake up”

---

---

---

---

---

---

---

## Neurosteroids

- Allopregnanolone
  - Brain levels induced by
    - Inflammatory mediators
    - Hypoxic ischemic insults
  - Protect against neuroexcitatory toxicity
  - Marked anti-seizure actions
  - Raise seizure threshold
  - Induces somnolence

---

---

---

---

---

---

---

---

## Neurosteroids

- Pregnenolone and pregnenolone sulphate
  - Placenta also secretes
  - Excitatory action in the brain
  - Cross the blood brain barrier
    - Normal – slow
    - Abnormal BBB – rapid transfer
    - Inflammation
    - Hypoxic ischemic insult

---

---

---

---

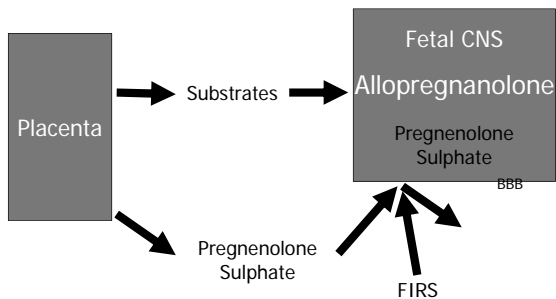

---

---

---

---

## Neurosteroids

---

---

---

---

---

---

---

---

---

---

---

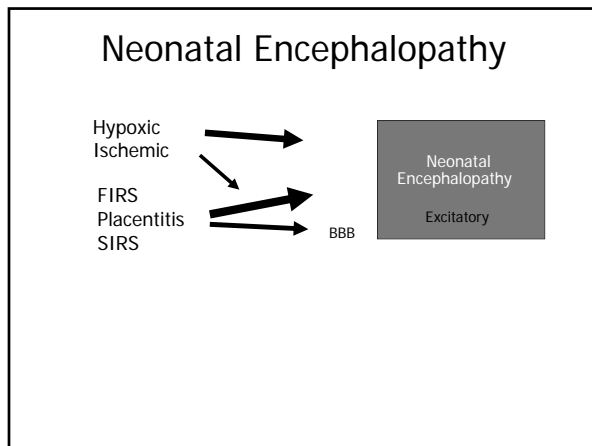

---

---

---

---

---

---

---

---

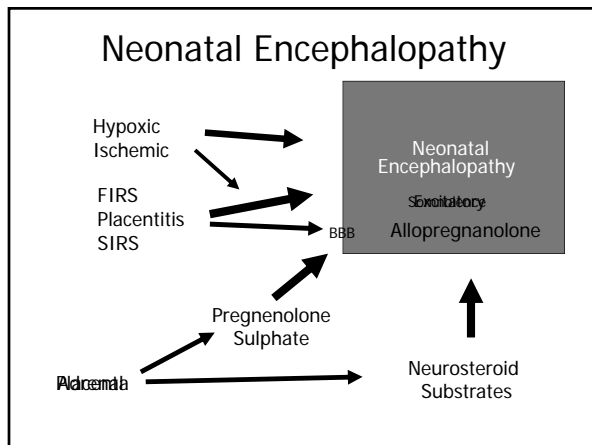

---

---

---

---

---

- ### Typical Clinical Course
- Born near normal behavior
  - Initial signs – excitatory
    - Constant activity – wandering, not lie down
    - Hyper-responsiveness
    - Hypertonus
    - Culminating in tonic-clonic seizure-like behavior
  - Onset of somnolent phase
    - Stress induced adrenal steroidogenesis
    - Neuroinflammation induces neurosteroids
    - Healing period
  - Recovery

---

---

---

---

---

---

---

---

## Typical Clinical Course

- Born seizure-like behavior
  - Less placental steroidogenesis
    - Lower levels protective neurosteroids
  - Inflammatory mediators
    - Induced blood brain barrier deficits
    - Allow sulfated neurosteroids into CNS
- With neonatal stress onset of somnolent phase
  - Stress induced adrenal steroidogenesis
  - Neuroinflammation induced CNS neurosteroids
  - Healing period

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

## Changes in responsiveness

---

---

---

---

---

---

---

---

### Changes in muscle tone

---

---

---

---

---

---

---

---

### Changes in muscle tone

---

---

---

---

---

---

---

---

### Changes in behavior

---

---

---

---

---

---

---

---

## Brain stem damage

---

---

---

---

---

---

---

---

## Seizure-like behavior

---

---

---

---

---

---

---

---

## Terms Generic Description of Signs

- Neonatal Encephalopathy (NE)
- Neonatal Gastroenteropathy (NG)
- Neonatal Nephropathy (NN)
- Neonatal Metabolic Maladaptation
- Neonatal Cardiovascular Maladaptation

---

---

---

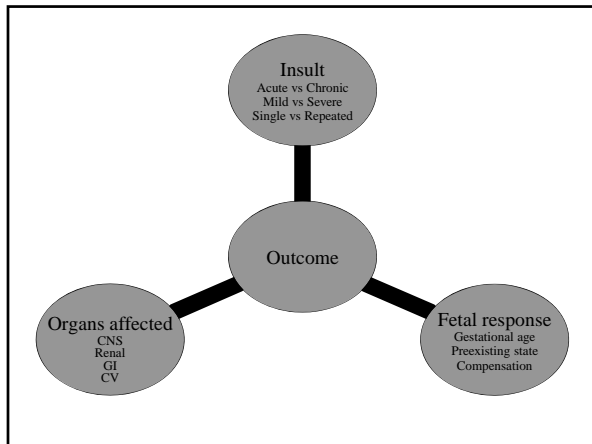

---

---

---

---

---

---

---

---

---

---

---

---

---

### Intrauterine Challenge

- Indications at Birth of intrauterine challenge
  - Cr level
  - Hypochloremic alkalosis
  - High PCV
  - High birth blood glucose
  - Persistently low blood glucose
  - Ca levels
  - Fibrinogen level
  - WBC
  - Low cortisol
  - Glucose level

---

---

---

---

---

---

---

---

### Fetal foal floating in a sea of creatinine

---

---

---

---

---

---

---

---

## **"Pong"**

Thoroughbred foal  
Born: May 7 at 6 PM  
Admitted: May 8 at 8:53 AM  
15 hrs old

---

---

---

---

---

---

---

## **"Pong"** History

- Term birth to a multiparas mare
- Normal gestation
- Stage 1 - not observed
- Stage 2 - 10 minutes or less
- Stage 3 - 1 hour
- Assisted to stand after 1.5 hours
  - Nursed from the mare

---

---

---

---

---

---

---

## **"Pong"** History

- Never vigorous
- Got up once during night
  - Only for short time
  - Did not nurse
- Bottle-fed 8 oz. of colostrum
- Referred for intensive care
  - Weak
  - Inability to stand

---

---

---

---

---

---

---

## **"Pong" Admission Physical**

- Marked oral, nasal, scleral, aural icterus
- Oral, nasal, scleral, aural injection
- Multiple oral petechia
- Marked lingual erythema
- Abdomen
  - Meconium in the right dorsal colon
  - Few borborygmi
  - Fetal/neonatal diarrhea

---

---

---

---

---

---

---

## **"Pong" Admission Physical**

---

---

---

---

---

---

---

## **"Pong" Admission Laboratory Data**

	Admission	Normal
Fibrinogen	461 mg/dl	150 mg/dl
WBC	800 cells/ul	5-10,000
Neutrophil	42% cells/ul	50-80%
Lymphocytes	38% cells/ul	20-50%
Creatinine	6.46 mg/dl	2.5-4.0
Glucose	44 mg/dl	60 – 120
PCV	54%	30 – 45%
TPP	6.1 gm/dl	4.0 – 5.5

---

---

---

---

---

---

---

## **"Pong"** Admission Problems

- Weakness, somnolence
- Not nursing
- Lingual erythema
- Injection
- Petechia
- Icterus
- Poor perfusion
- Diarrhea
- ↓ WBC,  
↑fibrinogen
- ↑ PCV, ↑ TPP
- ↑ Creatinine
- Hypoxemia
- ↑ lactate

---

---

---

---

---

---

---

## **"Pong"** Major Problems

---

---

---

---

---

---

---

## **"Pong"** Neonatal Encephalopathy

- Periods - bright and active
- Sudden onset of somnolence
  - Somnolence/periods of arousal
- Apparent facial paresis
  - Right ear moves slowly
- Generalized weakness

---

---

---

---

---

---

---

## **"Pong"** Neonatal Encephalopathy

- Periodic apnea
  - Up to 60 sec
  - With clustered breathing
- Inappropriate central tachypnea
- Apneusis (apneustic respiration)
- Hypercapnia
  - Without apnea

---

---

---

---

---

---

---

## **"Pong"** Neonatal Encephalopathy

- Seizure like activity
  - Opisthotonus, tonic/clonic marching activity
  - Minimal nystagmus
- Lingual erythema
- Moderate nasal septum hyperemia
- Hyperresponsive to stimuli
- No suckle or searching

---

---

---

---

---

---

---

## Neonatal Encephalopathy CNS Signs

- Most common and noticeable
  - Signs occur predictably - 90%
- Mild central insult
  - Multifocal lesions
  - Selective neuronal dysfunction
  - Slow maturation of coordination

---

---

---

---

---

---

---

## Neonatal Encephalopathy Signs of CNS disease

- Changes in responsiveness
- Changes in muscle tone
- Changes in behavior
- Signs of brain stem damage
- Seizure-like behavior
- Coma, death

---

---

---

---

---

---

---

---

## Neonatal Encephalopathy Signs of CNS disease

- Changes in responsiveness
  - Hyperesthesia
  - ■ Hyperresponsiveness
  - Hyperexcitability
  - ■ Hyporesponsiveness
  - ■ Periods of somnolence
  - Unresponsiveness

---

---

---

---

---

---

---

---

## Neonatal Encephalopathy Signs of CNS disease

- Changes in muscle tone
  - Extensor tonus
  - ■ Hypotonia
  - Neurogenic myotonia
  - Inability to protract legs

---

---

---

---

---

---

---

---

## Neonatal Encephalopathy Signs of CNS disease

- ■ Changes in behavior
  - Loss of suckle response
  - Loss of tongue curl
  - Loss of tongue coordination
  - Disorientation especially relative to the udder
  - Aimless wandering
  - Blindness
  - Loss of affinity for the dam
  - Abnormal vocalization ("barker")

---

---

---

---

---

---

---

---

## Changes in behavior

---

---

---

---

---

---

---

---

## ● **"Pong"** Neonatal Encephalopathy

---

---

---

---

---

---

---

---

## Neonatal Encephalopathy Signs of CNS disease

- Changes in respiratory patterns
  - ■ Central tachypnea (midbrain)
  - ■ Apneusis (pontine)
  - ■ Apnea (> 20 seconds midbrain)
  - ■ Cluster breathing (high medullary)
    - Ataxic breathing (medulla)
    - Cheyne-Stokes breathing - very rare
  - ■ Central hypercapnia

---

---

---

---

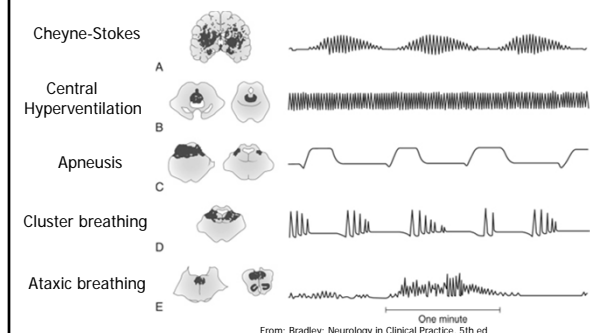

---

---

---

---

## Central Respiratory Patterns

---

---

---

---

---

---

---

---

## Neonatal Encephalopathy Signs of CNS disease

- Signs of brain stem damage
  - Loss of thermoregulatory control
  - ■ Weakness
  - Anisocoria (3rd nerve, one side)
  - Pupillary dilation (midbrain)
  - Pinpoint pupils (pontine)
  - ■ Hypotension
  - Loss of consciousness (reticular formation)
  - ■ Vestibular signs - circling, head tilt
  - ■ Facial nerve paresis

---

---

---

---

---

---

---

---

## Neonatal Encephalopathy Signs of CNS disease

- Seizure-like behavior (tonic/clonic generalized)
  - Marching type behavior (clonic, partial or gen)
  - Abnormal extensor tone (tonic, partial or gen)
  - Seizures
- Coma, death

---

---

---

---

---

---

---

## “Pong” Neonatal Encephalopathy Treatment

- Nutrition
  - Not nursing
  - Trophic feeding
  - Parenteral Nutrition
- Respiratory
  - Intranasal oxygen
  - Caffeine
  - Positive Pressure Ventilation
- Seizures
  - Phenobarbital

---

---

---

---

---

---

---

## “Pong” Neonatal Encephalopathy

- Hospital day 2
  - Seizures – resolved with phenobarbital therapy
  - Began ventilation
- Hospital day 3 – standing
- Hospital day 5 – nursing from bottle, more aware
- Hospital day 6 – off intranasal oxygen
- Hospital day 9 – nursing from mare

---

---

---

---

---

---

---

## **“Pong”**

### ● Neonatal Nephropathy

- Creatinine level slow to drop
  - Above normal until hospital day 11
- High fractional excretion of Na
  - As high as 2.18% - normal for neonatal foal <0.3%
  - Still > 1% at discharge (day 20)
- Development of significant edema
  - Persisted until day 6

---

---

---

---

---

---

---

### Neonatal Nephropathy

- Second most common target - 45%
- Common disease states
  - Mild decrease GFR
  - Mild acute tubular necrosis
  - Mild tubular dysfunction
  - Maldistribution of renal blood flow
- Less common disease states
  - Severe acute tubular necrosis
  - Irreversible acute damage
  - Chronic renal disease

---

---

---

---

---

---

---

### Neonatal Nephropathy

- Oliguria
- Anuria
- Edema formation
- Fluid overload
- Weight gain
- Persistently elevated Cr
- Birth Cr slow to drop
- Abnormal fraction excretions
- High amikacin trough levels
- Slow response to fluid challenges

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

### ● “Pong” Neonatal Gastroenteropathy

- Fetal/neonatal diarrhea
- Retained meconium
- Too much abdominal fill for not being fed
- Abnormal abdominal palpation
  - One loop of bowel thickened wall
- Day 7 began passing feces
  - Frequency > 24 hours
  - Enema dependent
- Day 17 resolved

---

---

---

---

---

---

---

---

### Neonatal Gastroenteropathy

- Third most common target - 40%
  - Especially when metabolic demands (digestion) are superimposed on cardiopulmonary instability
- Predisposition to sepsis and SIRS
  - Translocation of bacteria through the GI tract

---

---

---

---

---

---

---

---

## Neonatal Gastroenteropathy

- Dysphagia
- Colic
- Abdominal distension
- Gastric reflux
- Diarrhea
- Constipation
- Dietary intolerance
  - Milk replacer
  - Other specie's milk
  - Frozen mare's milk
  - Fresh mare's milk

---

---

---

---

---

---

---

---

## Neonatal Gastroenteropathy

- Mild indigestion
- Dysmotility
- Ileus
- Diapedesis of blood into the lumen
- Mucosal edema
- Epithelial necrosis
- Development of intussusceptions or structures
- Hemorrhagic gastritis or enteritis/colitis
- Pneumatosis intestinalis

---

---

---

---

---

---

---

---

## Neonatal Gastroenteropathy

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

### Neonatal Syndrome Cardiovascular tract

- Less commonly affected – 10 %
- Poorly responsive peripheral vasculature
  - To hypovolemic challenges
  - To endogenous/exogenous adrenergic agents
- Cardiac disease
  - Inappropriate bradycardia
  - Premature ventricular contractions
  - Supraventricular tachycardia
  - Ventricular tachycardia
- Persistent fetal circulation/PPH
- Cardiovascular collapse
  - Refractory hypotension
  - Cardiovascular shock
  - Septic shock

---

---

---

---

---

---

---

---

### “Pong”

#### ● Metabolic Maladaptation

- Hypoglycemia at admission – 44 mg/dl
- Hyperglycemic on glucose infusion – 243 mg/dl
  - Glucose diuresis
  - Hyponatremia, hypochloremia, hypokalemia
    - Diuresis, plasma osmotic effects
- Insulin therapy
  - Constant infusion regular insulin IV
  - Begun hospital day 2, weaned day 4

---

---

---

---

---

---

---

---

## Neonatal Metabolic Maladaptation Signs of Metabolic Disease

- Hypoglycemia
- Hyperglycemia
- Hypocalcemia
- Hypercalcemia
- Hyperlipemia/hyperlipidemia
- Slow response
  - To changing metabolic demands

---

---

---

---

---

---

---

## Neonatal Syndrome

- ■ NE - *Neonatal Encephalopathy*
- ■ NN - *Neonatal Nephropathy*
- ■ NG - *Neonatal Gastroenteropathy*
- ■ NMM - *Neonatal Metabolic Maladaptation*
  - NCM - *Neonatal Cardiovascular Maladaptation*
- ■ NAM - *Neonatal Autonomic Maladaptation*
- ■ NEM - *Neonatal Endocrine Maladaptation*

---

---

---

---

---

---

---

## "Pong" Problems

- Sepsis
  - Bacteremia - *Pantoea agglomerans*
- Septic shock
- Neonatal Encephalopathy
  - Central Respiratory failure – ventilation therapy
- Neonatal Nephropathy
- Neonatal Gastroenteropathy

---

---

---

---

---

---

---

## **"Pong" Problems**

- Neonatal Metabolic Maladaptation
- Edema
- Urachitis
- Hepatomegaly
- LDN
- Patent Urachus
- Over at knees

---

---

---

---

---

---

---

## **Therapeutic Interventions in Neonates**

---

---

---

---

---

---

---

## **Neonatal Syndrome Clinical Course/Therapeutic Intervention**

- As severe organ dysfunction develops
  - Oxygen delivery to the tissues interrupted
  - Progression of more severe disease
- Therapeutic intervention
  - Prevent hypoxic ischemic episodes
  - Support organ system function
    - Allow recovery
  - Prevent secondary sepsis
  - Prevent other complications

---

---

---

---

---

---

---

## Neonatal Syndrome Maintain Tissue Perfusion/Oxygen Delivery

- Adequate cardiac output/perfusion
  - No magic blood pressure value
  - Adequate perfusion reflected by
    - Maintaining urine output
    - Perfusion of the limbs
    - Perfusion of the brain - mental status
    - Perfusion of bowel - GI function
  - Inotrope and pressor therapy

---

---

---

---

---

---

---

---

## Neonatal Syndrome Maintain Nutrition

- Avoid
  - Catabolic state
  - Hypoglycemia
    - Hypermetabolism
- All compromised neonates
  - Will benefit from glucose therapy
- Hyperglycemia
  - Insulin therapy
- Enteral Nutrition
- Parenteral Nutrition

---

---

---

---

---

---

---

---

## NE Therapy

- Support cerebral perfusion
  - Insure volemia
    - Careful fluid replacement
  - Defend perfusion
    - Inopressor therapy
- Insure oxygen delivery
  - Achieve pulmonary O<sub>2</sub> loading
  - Avoid anemia
- Nutritional support
  - Permissive underfeeding

---

---

---

---

---

---

---

---

## Therapy

- DMSO
- Mannitol
- Thiamine
- MgSO<sub>4</sub>
- Others

---

---

---

---

---

---

---

## Seizure Control

Phenobarbital? Midazolam? Others?

---

---

---

---

---

---

---

## Neonatal Nephropathy Therapy for Renal Dysfunction

- Avoid fluid overload
  - Ventral edema
    - Between front legs ("jelly belly")
    - Proximal limbs
    - Back
    - Generalized
  - Monitor body weight at least SID
- Avoid NSAIDs

---

---

---

---

---

---

---

## Neonatal Nephropathy Therapy for Renal Dysfunction

### Fluid restriction

- Most important management tool
- Deliver maintenance fluids or less
  - "Run them dry"
  - Balance nutritional needs/fluid overload
- Watch for onset of diuresis
  - Transition to high output renal failure
  - Initiation of normal renal function

---

---

---

---

---

---

---

---

## Neonatal Gastroenteropathy Treatment of GI Dysfunction

- Signs of damage lag behind other tissues
- Continued feeding with episodes of hypoxemia
  - May result in further damage
  - Oral feeding undertaken with great care
  - Full nutritional requirements cannot be met enterally
  - Partial parenteral nutrition

---

---

---

---

---

---

---

---

## Neonatal Gastroenteropathy Treatment of GI Dysfunction

- Important trophic substances in colostrum
  - Only small amounts needed for effect
- Luminal nutrition important to enterocyte health
  - Not feeding increases likelihood of translocation
- Small feedings 1-2 oz QID
  - Fresh colostrum - not refrigerated - best
  - Fresh mare's milk
  - Frozen colostrum or mare's milk
  - Don't use milk replacer

---

---

---

---

---

---

---

---

## Neonatal Syndrome Recognition/Early Treatment of Secondary Infections

- Very susceptible to infections
- Monitor
  - For localizing signs of infection
  - Repeated blood cultures
- Repeat measurements of IgG
  - Repeated plasma transfusions

---

---

---

---

---

---

---

---

## "Pong" Therapeutic interventions

- |                                |                                 |
|--------------------------------|---------------------------------|
| ■ INO2                         | ■ Caffeine                      |
| ■ Fluid boluses                | ■ Positive pressure ventilation |
| ■ Dobutamine                   | ■ Parenteral Nutrition          |
| ■ Ticarcillin, clavulanic acid | ■ Trophic feedings              |
| ■ Plasma transfusion           | ■ Sucralfate                    |
| ■ CRI glucose fluids           | ■ Domperidone -- mare           |
| ■ Insulin                      | ■ TMS , Cephalixin              |
| ■ Phenobarbital                | ■ Bandaging                     |
